

# Goldwater Lake

## May 25, 2016

Photos of John Carter & Joel Cohen the children during their visit to the Goldwater Lake Nature Camp for Solar Viewing. Was a very nice event and the kids really seemed to enjoy themselves. John started off with the lessons about the Sun and Joel added a few comments as the kids lined up to view through the telescope. There were two groups of kids, the older ones were first and the younger ones were second group.

The setup used was a TeleVue 76 f6.3 telescope with a Coronado 60mm Hydrogen Alpha filter on a Celestron StarSense mount. It was beautiful weather and nice and cool for viewing.
